>> thx..at this point why dont you plan on heading to the spill location. if Ex. 6 - Personal Privacy can be there great. Ex. 6 - Personal Privacy is right that water to communities will be greatest concern. Not much we can do about that. I'm sure we will get asked about the plume or dispersion of the estimated 5k of chemical. I think Dupont and others may be assisting in sampling analysis.

>> The chemical is not on the CLP TCL and I doubt any lab routinely analyzes for it. I checked CAS analytical Lab and they don't appear to do it. It would likely show up as a TIC on SVOA or possibly VOA analyses. However, that only gives a 'tentative' identification and a very generally estimated concentration. That won't cut it for human health. They may have to have a government lab set up to analyze or maybe the facility can, but that would be a conflict of interest. I'll call Dan Slizys early tomorrow and put out some feelers.

>>

>> I'm signing off, but please call if we get the 'go'. Sounds like the biggest task will be providing water for all those counties.
